

# Ready to Build A Stronger Partnership With You

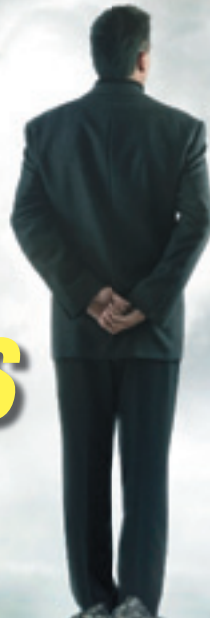

You already know EHS Support. We hope our successful past collaboration gives you a clear picture of what we stand for—and what we can deliver to your organization.

And now, we'd like to do even more for you.

EHS Support can capably represent a broad range of your EH&S interests, including Environmental Remediation Management. Our unique solutions, depth of experience and distinct collaborative process offer significant gains in productivity, efficiency and profits across the entire EH&S spectrum.

# ***We Won't Allow Your Liability Costs to Spiral Out of Control***

EHS Support develops cost effective environmental remediation strategies that reduce future environmental cleanup liability. We focus on low-cost alternatives and expedited closure strategies that meet the intent of the regulatory requirements, while providing an all-encompassing perspective on managing environmental risk and liability.

**There's no substitute for our experience. We have successfully managed large portfolios of remediation projects and closed sites under federal, state, local and voluntary programs. What's more, we have extensive experience in risk transfer and minimization techniques, including insurance mechanisms.**

Take a moment to absorb the EHS Support philosophy, and see how we transform environmental liability into economic viability with remediation solutions that are second to none.

# EHS Support cost-effectively manages your remediation projects as a portfolio. We think like you do.

With nearly a quarter-century of experience behind us, we are also known for zeroing in on our clients' needs, communicating with them on a "24/7/365" basis - as vital information unfolds - plus, delivering answers and implementing solutions in an extremely timely manner.

How do we successfully manage your remediation portfolio? By becoming a de-facto extension of your company's best interests—treating your money and expenditures as if they were our own. Combine that commitment, with our *broad, deep knowledge of risk management strategies for entire portfolios and individual sites within those portfolios*, and you'll soon see just how adept we are at managing current (and future) risk.

**The EHS Support Approach:** We accept going in that you demand *excellent service* (both technical and communication), *expert delivery* (on time and on target) and *best overall cost*. We understand that maximum environmental, health and safety—coupled with remediation risk compliance and cleanup liability reductions—are the iron-clad goals of your effort.

EHS Support seeks to:

- Understand and champion your business position
- Achieve maximum EHS and remediation risk compliance
- Develop risk management strategies for entire portfolios that mitigate current and future risk using federal, state, and local environmental regulations
- Manage sites to meet your expectation for closure and financial allocation.

**The EHS Support Scope of Work:** It's not enough to provide a capable and broad base of services and expertise. We realize you may bring your own set of environmental remediation proficiencies to the table. As such, we can act at your discretion in as many areas or as few areas as you desire—to save costs, certainly—but to also guarantee your comprehensive needs are met by the highest-level stakeholders possible.

EHS Support scope includes:

- Portfolio management of select remediation projects as determined by you
- Technical support for your project managers as determined by you to allow more work to be completed in-house (e.g., Superfund representation, technical expert support, etc.)
- Compliance and Mergers & Acquisition support as determined by you.

**The EHS Support Advantage:** We specialize in high-risk and complex sites and can provide Superfund support as necessary. We deliver significant expertise in risk management and transfer, and offer a significant, successful track record in portfolio management. This is provided on an "on-demand basis" that's driven by your environmental remediation needs, rather than as a "one size fits all", cookie cutter solution.

EHS Support advantages include:

- Remediation risk management plan development & peer review
- SEC estimating and reporting
- Management presentations & annual budgeting
- Corporate Remediation Program development
- Reduction of SG&A costs
- Budget and financial tracking.

## The EHS Support Difference: Experienced, consensus-builders. Fierce, capable advocates.

While steeped in our knowledge of what environmental remediation management means to your business and your bottom line, EHS Support has vast experience across a wide range of sectors and services. We've conducted merger and acquisition, PRP and CERCLA,

remediation, process improvement, and compliance support for the Petroleum, Chemical, Financial, Legal, Mining, Pharmaceutical, Specialty Metals, Telecommunications, and Wood Treating industries.

**Experience:** This breadth of experience drives us to consistently quantify the business value of remediation liability—to put this traditionally hard-to-quantify liability into business terms that become both tangible and actionable. Experience also drives our cost-effective management of environmentally-impaired assets, helps us to reduce future liability risk and, when appropriate, guides the way to effective environmental cleanup liability transfer.

**Advocacy:** We use these skills to facilitate focused strategy sessions using various management tools (*e.g., Mind Manager, Morphological Analysis, Decision Criteria, and Correlation Matrices*) that allow input from all constituencies. We have experience in conducting these sessions both in person and remotely using web meetings and conference calls, further saving expenditures in unnecessary travel.

**Success:** The long and short of it? You'll find no better experienced or capable personnel to represent your best interests when it comes to environmental remediation management. And, you'll find no better, more fierce advocates should you run aground of environmental liability.
